- ☐ Roldan, Mickey John

Introduction

Managing academic information, tuition-related transactions, and personal account settings through separate platforms can be inefficient and time-consuming for students. Accessing grades, checking enrolled subjects, monitoring schedules, reviewing financial balances, and managing account preferences may require students to navigate different systems or rely on manual processes. To address these challenges, this project proposes a web-based Academic and Financial Management Portal for the University of Perpetual Help System DALTA.

The proposed system provides a centralized student dashboard where essential academic, financial, and account-related information can be accessed through a single interface. The portal integrates four major components: the Student Dashboard, Academics Hub, Finance and Tuition Module, and Portal Settings. Through these components, students can conveniently monitor their academic performance, view enrolled subjects and schedules, review tuition-related information, simulate financial transactions, and manage selected account preferences.

The proposed portal is designed to address common difficulties associated with accessing information from disconnected platforms and manual procedures. Students may experience delays when checking academic records, monitoring balances, or

completing transactions that require physical processing. A centralized digital interface can help demonstrate how these processes may be organized into a more accessible and user-friendly environment. The system also provides visual representations of important information, such as GPA summaries, academic progress, class schedules, financial balances, transaction histories, and status indicators.

The Academic and Financial Management Portal combines these functions into one cohesive student-centered platform. The Academics Hub allows students to view their academic profile, enrolled subjects, instructors, schedules, academic status, completed credits, and GPA. The Finance and Tuition Module provides a simulated environment for viewing balances and demonstrating tuition payment or cash-in transactions through channels such as GCash, Maya, Bank Transfer, and 7-Eleven. Meanwhile, the Portal Settings module allows students to manage selected profile information and customize notification and assistant preferences.

As a Computer Graphics and Interactive Design project, the system emphasizes visual organization, interactive interface elements, graphical representation, usability, and responsive design. The prototype demonstrates how computer graphics concepts can be applied to a practical student information portal while providing an intuitive and engaging user experience.

For academic and demonstration purposes, financial transactions, academic records, AI-generated recommendations, and other dynamic information presented in the prototype are simulated and do not represent actual University of Perpetual Help System DALTA transactions, official academic records, or live institutional data. The system does not process real financial payments or directly connect to the University's official student information and financial systems.

General Objective

To design and develop a web-based Academic and Financial Management Portal that demonstrates an integrated, user-friendly, and visually interactive platform for managing simulated academic, financial, and account-related student information.

Specific Objectives

Specifically, the project aims to:

1. Design and implement a centralized student dashboard that presents simulated academic performance, daily class schedules, GPA information, academic progress, and financial balance summaries in an organized visual interface.
2. Develop an Academics Hub that enables students to view simulated academic information, including student profile details, enrolled subjects, course descriptions, units, instructors, schedules, academic status, completed credits, and cumulative GPA.
3. Implement an assignment submission interface that demonstrates how students can select courses and submit digital academic deliverables through the portal prototype.
4. Develop a Finance and Tuition Module that allows students to view their simulated tuition balance, perform simulated cash-in transactions, and demonstrate tuition payment procedures using channels such as GCash, Maya, Bank Transfer, and 7-Eleven.
5. Provide a simulated student ledger and statement of account that records demonstration transactions using official receipt numbers, particulars, debit assessments, credit payments, and running balance reconciliation.
6. Develop a Portal Settings module that allows students to manage selected profile information and customize available portal preferences, including notifications, timetable reminders, AI assistant options, and payment checkout preferences.
7. Apply computer graphics and interactive design principles through the use of graphical cards, icons, buttons, progress indicators, tables, timelines, status indicators, navigation components, and interactive panels.
8. Design a responsive and intuitive user interface that provides consistent visual presentation and interactive feedback across the major modules of the proposed portal.

9. Demonstrate interactive system behavior through simulated navigation, data updates, transaction processing, interactive schedule checklist tracking, assignment submission, and customizable user settings.
10. Evaluate the usability and visual effectiveness of the prototype based on its organization, readability, responsiveness, consistency, interactivity, and ease of navigation.

Computer Graphics and Interactive Design Implementation

The Academic and Financial Management Portal applies computer graphics and interactive interface programming principles to create a visually organized and responsive student dashboard. The system utilizes graphical components such as cards, buttons, progress indicators, icons, tables, timelines, interactive panels, and visual status indicators to present academic and financial information clearly. Interactive elements provide visual feedback when users navigate between modules, modify settings, simulate transactions, and access academic information.

The Dashboard incorporates graphical representations such as GPA visualization, progress tracking, schedule timelines, and financial balance cards. These elements demonstrate the application of layout management, visual hierarchy, typography, graphical rendering, user interaction, and responsive interface design.

For demonstration purposes, financial transactions, AI-generated recommendations, and academic information may be simulated within the prototype and do not necessarily represent actual university transactions or live institutional data.

Layout (Screenshots with Description)

1. Dashboard

The main landing page greets the student and provides a daily summary, including a progress tracker ("You're in the Zone Today"), an AI-generated suggestion box for upcoming tasks, today's class schedule and timeline, and a quick view of the student's tuition balance card with assessment summary and Statement of Account navigation.

2. Academics Hub

This page serves as the student's academic vault, displaying key details such as Student ID, year level, degree program, academic status, completed credits, and cumulative GPA. Below this is a detailed table of enrolled subjects (code, description, units, instructor, schedule, and status), with tabs to view previous years' subjects. An assignment submission panel on the right lets students upload course deliverables directly.

3. Finance & Tuition

This module allows students to top up their "Perpetual Delta Card" balance or pay tuition fees using various simulated payment channels (GCash, Maya, Bank, 7-Eleven). As

the system does not integrate with an actual payment gateway, these transactions are simulated for demonstration purposes only and do not process real financial payments. The interface includes quick amount selection buttons, an input field for cash-in amount, and a mobile number field for e-wallet transactions, while an official Statement of Account & Student Ledger on the right logs all simulated institutional billing with official receipt numbers, debit charges, credit payments, running balances, and a Print SOA option.

4. Portal Settings

This page allows students to manage personal information (full name, academic major, student email) and update their profile. It also includes toggles for portal preferences such as AI Schedule Assistant, Grade Notifications, SMS Timetable Reminders, and Fast Payment Checkout.

The screenshot shows the 'Portal Settings' page of the University of Petroleum portal. The page is divided into two main sections: 'PERSONAL INFORMATION' and 'PORTAL PREFERENCES'. The 'PERSONAL INFORMATION' section includes fields for 'Student Name', 'Academic Major', 'Computer Science', and 'Student Email', with a 'Save Profile Changes' button at the bottom. The 'PORTAL PREFERENCES' section includes toggles for 'AI Schedule Assistant', 'Grade Notifications', 'SMS Timetable Reminders', and 'Fast Payment Checkout', with a 'Save Preferences' button at the bottom. The page also features a sidebar with navigation links and a top header with the university's name and logo.
